

## **For Immediate Release**

**Leawood, KS and Ankeny, IA ., June 1, 2008** Lynxspring, Inc. and Quality Automation Graphics, along with NextWindow, LTD announced today a strategic partnership to collaborate on a buildings energy efficiency education display(EEED). This product is used for displaying a buildings real time, historical, or simulated energy efficiencies.

The building's EEED is designed to inform people about the economic and environmental benefits of the facility. Whether the building owner has a LEED certified building or wants to convey their "green" message, they now have an affordable solution. Additionally, the product meets the requirements for earning a LEED credit (Innovation & Design).

"This product is unlike any other solution on the market. It puts the product into the hands of building controls companies, building owners, AEC professionals, and building automation systems integrators. QA Graphics provides the content, display, and a gateway appliance designed by Lynxspring, that ties into the building automation system. It can easily be installed and maintained without using any proprietary products," says Dan McCarty, President of Quality Automation Graphics.

"Having a product that promotes energy efficiencies with our touch screen technology is an emerging market for NextWindow," said Anthony Uhrick, Vice President of NextWindow North America.

### **About Lynxspring, Inc.**

Lynxspring, founded in 2001, is leading technology company addressing building automation control requirements with a focus on interoperability. Lynxspring manufactures and distributes web-enabled, open protocol control solutions. Using Tridium's Niagara software in an embedded platform, Lynxspring provides internet-based integration and interoperability. [www.lynxspring.com](http://www.lynxspring.com)

### **About Quality Automation Graphics**

Quality Automation Graphics is an innovative leader, designing graphical user interfaces utilizing 3D graphics and animation for the building control industry. Our core competencies include: energy efficiency education, 3D graphic design,

interactive applications, graphic outsourcing, symbol library creation, and LCD display solutions. [www.qagraphics.com](http://www.qagraphics.com)

### **About NextWindow, Ltd**

NextWindow is a leading designer and developer of optical touch screens. NextWindow manufactures touch sensitive overlays for existing LCD or plasma displays, and also OEM touch assemblies for integration into manufacturers' display models. [www.nextwindow.com](http://www.nextwindow.com)
